

## ► Epicodus Capstone Proposal ◀

# “Kovisereis”

= **K**orean + **Mov**ie + **TV series**

### ◦ Overview

A mobile application that recommends Korean movies and TV shows. The users of this app will be those who are interested in Korean content but are uncomfortable to search with a specific query on existing massive movie application. The product will be able to display lists of movies and TV shows and offer detail page of each movie or TV show. Also, It will have search functionality and user's favorite list.

### ◦ Minimum Viable Product:

- App for iOS
- List of movies & TV show
- Detail screen of specific movie or TV show
- Capability to search by title
- Capability to add and display user's favorite movies and TV shows

### ◦ Tech stack:

- React Native
- Expo
- AJAX
- The Movie Database API
